RESEARCH CONSENT FORM

Title: The Divergent Remote Association Task in Humans: Jointly Assessing Divergent and Convergent Thinking
Principal Investigator: Lav R. Varshney, Ph.D., Della Pietra Infinity Professor
Department of Electrical and Computer Engineering, Stony Brook University
Lav.varshney@stonybrook.edu

KEY INFORMATION
(1) The information in this form is being used to seek your consent for a research study. Being in the study is voluntary. It is up to you.
(2) This research is being done by researchers at Stony Brook University, in collaboration with researchers at the University of Illinois Urbana-Champaign, to learn how people perform on a set of short creativity and reasoning tasks, and how performance on a newly developed task relates to performance on established ones. Participating involves two in-person sessions in a campus lab, held on separate days; the first takes about 45 minutes and the second about 50 minutes, including a short break (about 1 hour and 35 minutes in total).
(3) Study procedures for this research are completing several short word and reasoning tasks on a lab computer like coming up with words, finding a single word that connects other words, choosing the piece that completes a visual pattern, and writing brief responses to short everyday science scenarios. You will also answer a brief set of personality questions and provide basic demographic information. Some of these tasks have no right or wrong answers.
(4) The most likely risk to you of the research is a potential loss of confidentiality. See the RISKS / DISCOMFORTS section of this form for more detail.
(5) There is no expected direct personal benefit from participation.
(6) The alternative is to not participate.

You are being asked to be a volunteer in a research study.

PURPOSE
The purpose of this study is to learn how people perform on a newly developed creativity task, and how that performance relates to performance on established tests of creativity and reasoning.

- You are eligible to participate because you are a member of the Political Behavioral Economy Lab paid subject pool at Stony Brook University, are 18 years of age or older, are fluent in English, have normal or corrected-to-normal vision, are available for two sessions on separate days, and have not taken part in a study using these tasks in the past 12 months.
- The study plans to recruit about 260 participants.

PROCEDURES
If you decide to be in this study, your part will involve:

- Two in-person sessions, held on separate days, that you complete on a computer in a campus lab (at a station separated from others by a screen). In the first session (about 45 minutes) you will complete a few short tasks: coming up with words that are as different from one another as possible, finding a single word that connects three given words, and a set of visual pattern-completion problems, and you will then answer a brief set of personality questions and provide basic demographic information. In the second session (about 50 minutes) you will complete eight short word tasks (up to two minutes each), take a short break, and then write brief responses to short everyday science scenarios.
- Some of the tasks are intentionally difficult and have no correct answer; you are not expected to solve them all. You will not be asked about sensitive or distressing topics.

RISKS / DISCOMFORTS
The following risks/discomforts may occur as a result of you being in this study:

- The most likely risk to you of the research is a potential loss of confidentiality. We minimize this risk by not collecting any directly identifying information within the task website and by linking your two sessions only through a random study code.

BENEFITS
There is no direct benefit expected as a result of you being in this study.

PAYMENT TO YOU
You will receive $15 for each session you complete (a total of $30 for two completed sessions). Payment is made session by session: if you complete the first session and do not return for the second, you will still receive $15 for the first session. However, no compensation will be offered for incomplete sessions.

Payment to you will be provided through a Greenphire ClinCard - a prepaid debit card. Each time you complete a study visit, funds will be electronically added to your card, typically within one business day. You can use the card like a regular debit card anywhere Mastercard is accepted, or you can withdraw cash in-store or at an ATM. However, there may be fees drawn against the balance of the card for cash withdrawals and inactivity. You will receive additional instructions and a cardholder agreement when the card is issued.

To issue and manage your ClinCard, we will share some of your personal information (such as your name, date of birth, address, and Social Security Number) with Greenphire, LLC and Stony Brook University's Department of Finance. This information is required for payment, identity verification, and tax reporting. Greenphire will not receive any health-related information or use your information for any purpose other than administering payment.

Please keep your ClinCard safe. **If your card is lost or stolen, a replacement card can be issued, but there may be a fee.**

If you have questions about your card or payments, study staff can assist you.

Please check the appropriate box below and read the related information carefully:
__ U.S. Citizen or Resident Alien. If paid $600 or more a year as a research subject, your Social security number and the amount paid will be reported to the IRS by the Research Foundation. Taxes may have to be paid on this money.

__ Nonresident Alien. For tax purposes, all payments made will be done through the Research Foundation and a 30% tax will be withheld. All withholdings and payments will be reported to the IRS by the Research Foundation.

CONFIDENTIALITY
We encourage you not to share any personal or sensitive information during the study activities. We will use all reasonable efforts to keep your personal information confidential, but we cannot guarantee absolute confidentiality. We will ask for your contact information to schedule your two sessions and to provide your compensation; this information is kept securely by the study team and is not entered into the task website. Your answers to the word and writing tasks are recorded by a task website run by our collaborators at the University of Illinois Urbana-Champaign, and the visual pattern-completion test is given and scored on a separate website run by its publisher, Pearson; neither of these receives your name or any other information that identifies you. Your task responses are linked only by a random study code, and your identifying information is replaced by an anonymous code before the data are analyzed. When this research is discussed or published, no one will know that you were in the study.

We want to make sure that this study is being done correctly and that your rights and welfare are being protected. For this reason, we will share the data we get from you in this study with the study team, Stony Brook University's Institutional Review Board, applicable Institutional officials, and certain federal offices, including the Office for Human Research Protections (OHRP), and, where applicable, the Food and Drug Administration (FDA). However, if you tell us you are going to hurt yourself, hurt someone else, or if we believe the safety of a child is at risk, we will have to report this. In a lawsuit, a judge can make us give them the information we collected about you.

COSTS TO YOU
You are responsible for your own travel to and from the campus study site for each of the two sessions. There are no other foreseeable costs to you from participation in this study.

ALTERNATIVES
Your alternative to being in this study is to simply not participate.

CONSEQUENCES OF WITHDRAWING
You may discontinue your participation at any time during the study. This will not result in any negative consequences for you. You will still be paid for any session you have completed, as described in the PAYMENT TO YOU section above. If you would also like the information already collected from you to be left out of the study or destroyed, tell the research team member present or email the study coordinator, and we will do that.

REMOVAL FROM STUDY
The researchers may stop your participation in this study without your consent if they believe it is in your best interests, if you object to any future changes that may be made to the study plan, and/or if you appear unable or unwilling to complete the tasks as instructed. Examples of causes for removal are using outside resources or getting help from someone else during the tasks. If you are removed prematurely for one of these reasons, you will not be paid in full for that session. Some of the tasks include check questions that tell us whether answers were given attentively; these only affect whether your answers are used in our analysis, and never affect your taking part or your payment.

INFORMATION ABOUT DATA
Identifiers might be removed from your identifiable private information and after such removal, the information may be used for future research studies or distributed to another investigator for future research studies without additional informed consent from you or your legally authorized representative.
After identifying information has been removed, we may place the study data, along with the research materials and analysis code, in an online scientific repository so that other researchers can use them. Storage there is open-ended and researchers with an account on the hosting website will be able to access the data. You may take part in the study without allowing this: if you would prefer that your data not be shared in a public repository, tell the research team member present or contact the study coordinator at any time, and your data will be kept only within the study team.

COMMERCIAL DEVELOPMENT
Your information (even if identifiers are removed) will not be used for commercial profit.

RIGHTS AS A RESEARCH SUBJECT
- Your participation in this study is voluntary. You do not have to be in this study if you don't want to be.
- You have the right to change your mind and leave the study at any time without giving any reason, and without penalty.
- Any new information that may make you change your mind about being in this study will be given to you.
- You will get a copy of this consent form to keep
- You do not lose any of your legal rights by agreeing to take part in this study.

QUESTIONS ABOUT THE STUDY AND YOUR RIGHTS AS A RESEARCH SUBJECT

- If you have any questions, concerns, or complaints about the study, you may contact Dr. Lav R. Varshney at (631)-632-1818.
- You may also contact the study coordinator, Dr. Babak Hemmatian, at babak.hemmatian@stonybrook.edu with any questions about the study or your participation.
- No individual results will be shared with you. If you would like to receive a copy of the overall results once the study is complete, tell the research team member present or email the study coordinator, and a copy of the resulting manuscript will be sent to the email address you provide.
- If you have any questions about your rights as a research subject or if you would like to obtain information or offer input, you may contact the Stony Brook University Research Subject Advocate, Ms. Lu-Ann Kozlowski, BSN, RN, (631) 632-9036, OR by e-mail, lu-ann.kozlowski@stonybrook.edu
- Visit Stony Brook University's Community Outreach page, https://www.stonybrook.edu/commcms/research-community-outreach/index.php
- For more information about participating in research, frequently asked questions, and an opportunity to provide feedback, comments, or ask questions related to your experience as a research subject.

If you choose "I agree" and click on the button below to advance, it means that you have read (or have had read to you) the information given in this consent form, and you would like to be a volunteer in this study.
